#### ADDING VALUE THROUGH SERVICE

We analyse, design, develop, integrate, deploy and support systems in composite, integrated business and IT environments.

Cross-functional teams of skilled professionals ensure the correct mix of business experience and technical understanding in delivering scalable software projects and service.

Our focus on business outcomes allows us to closely connect IT and business strategy and by following an iterative, incremental approach in development and delivery we provide clients with quicker time to market for their business initiatives.

## APPLICATION OUTSOURCING SOLUTIONS

- Application Management for on-going support of existing applications sets.
- Application Development & Maintenance is a full development, implementation and on-going management service for new and existing applications.
- Microsoft application outsourcing provides enhancement and management services for Microsoft applications.
- Design - Build – Support... managing custom or packaged applications beyond initial implementation.
- Application Testing delivers execution and management services through the correct mix of processes and dedicated professionals.
- Legacy Modernisation: By optimising legacy applications to new technologies we assist you with maximizing business value and retain your legacy applications business know-how whilst consolidating support and maintenance.

## COMPETITIVE ADVANTAGE THROUGH QUALITY PEOPLE

We hold a fundamental belief that people are far more valuable than technology. We pursue the brightest and most passionate people and encourage them to engage in innovative thinking.

Through skill and experience our program and project managers, business and system analysts, developers, testers, system integrators and support specialists maximize leverage from current technologies.
